Client Update 12

Water Safety & Quality from Exodus & Company Boreholes

1 Water Safety & Quality

The quality and safety of water is fundamental to human development and well-being. Health risks may arise from consumption of water contaminated with infectious agents, toxic chemicals, and radiological hazards. The safety and accessibility of portable/drinking-water are a major concern with Exodus & Company.

2 Mitigation Measures

Exodus & Company routinely tests water from our boreholes with established laboratories for its suitability for domestic use. This helps us safeguard the health and safety of our stakeholders who use water from our boreholes. However, where clients are getting water from boreholes elsewhere, as a source of drinking water, they must be cautious and avoid using the water until its confirmed that the quality of the water is safe for human consumption.

3 Useful Tips

A significant amount of diseases could be prevented by:

- 3.1 Avoiding drinking water from unsecure water sources.
- 3.2 Following adequate hygiene/sanitation practices and ensuring high standards of cleanliness.

NB: Exodus & Company is committed to provide access to safe water in our housing communities in order to promote a healthy and safe community.
