Client Update No. 12

30 October 2013

Development Works Update:Madokero Estate

It has been noted with concern that some of you are using heavily loaded trucks to gain entry into their stands, posing a major risk of collapse to stand access culverts. Damages to the access culverts can cause blockages to storm water drains, a situation which may result in flooding of your stands and roads from heavy rains.

We strongly implore you to exercise due care to avoid unnecessary damage to the drainage network in the Estate. Those who will continue using heavily loaded vehicles across the stand access culverts will be responsibility for fixing them should they be damaged.

However, to avoid damaging the stand access culverts, we encourage you to put concrete on your entrance first to protect the culverts against heavy loads.
